Docket No. AUS920010557US1

23. A system for managing an electronic document within a computer network, the system comprising:

5 a storage component which contains a customer profile for a user;

a processing component which creates an electronic receipt containing information about a transaction executed by the user at a point of sale; and

10 a communication component which sends the electronic receipt from the point of sale to a database, wherein the database is designated by the customer profile.

24. The system according to claim 23, further comprising:

15 an input component which receives search parameters from the user, wherein the search parameters specify an electronic receipt within the database;

20 a processing component which initiates a receipt search object to retrieve the specified electronic receipt from the database, according to the search parameters; and

a downloading component which downloads a copy of the retrieved electronic receipt to a client machine designated by the customer profile.
